

Detectives' Endowment Association, Inc.

Health Screening Program

Through a partnership with Northwell Direct, all active and retired members who are covered by the DEA Health Benefit Funds will be eligible for a heart scan with calcium score and CT chest scan at Northwell Health's Staten Island University Hospital.

This scan can assist in identifying signs of heart disease and yield important information regarding the health of your lungs, liver, pancreas, and additional structures in the upper abdomen. The Northwell Direct and DEA partnership has performed hundreds of scans over the past three (3) years and is proud to serve Benefit members.

Clinical Benefits

An early screening is beneficial for members to help them reduce their risk before symptoms may be evident. The scan takes under 15 minutes and was chosen to help minimize the risk of radiation exposure. Northwell Health radiologists will review the scan and one of our providers will reach out to you directly if there are abnormal results. Northwell Health will also partner with you to coordinate care with one of our providers if follow-up is needed.

How to Schedule Your Appointment

Contact the DEA Health Benefits Office at **(212) 587-9120** if you have any questions regarding eligibility and to receive the voucher. Upon receipt of the voucher, please call the dedicated Northwell Direct Concierge phone line at **(516) 492-3297** to schedule your screening appointment.

Test Results

Test results are mailed to the patient within seven (7) business days of the scan. Any patients who have abnormal results will receive a phone call from one of our providers. If you wish to have a copy of the test results mailed to your provider, please let us know while scheduling and we can provide the appropriate medical release forms. This must be requested in advance of your test.

Services provided at Verrazano Imaging at Staten Island University Hospital

256A Mason Avenue, Staten Island, NY 10305

Member payment is \$175

Heart scan with calcium score and CT chest scan is \$375
